

Car Parking Kit

Hello

Thank you for purchase my asset. This is based on my own game. My main goal is **Performance**, **Good Looking** and **Simplicity** !!! You can simply make your own car parking game in few hours with this amazing simple kit!!!!

This is main parking manager component:

Finish Menu: Drag here your menu gameObject that you want to be activated when parking is done successful.

TimerCount Menu: Drag here your Time Counter gameObject when car is stay in correct place of park location.

FailedParking Menu: This will be activated when parking is failed. This is happen when player car is collide more than 3 times with parking side objects

Collision Score 0 1 2 3 4: How much score give to player based on collision counts before parking is done? more collision count, means less score

Count Down Text: This is 3...2...1...=>Parked!!! text

Collision Count Text: This is collision counter text on top of the screen.

Finish Score Text: Drag your finish menu score text to show player earned score after parking is done.

Park Place Renderer: This is parking place renderer for changing color to green when car in correct place on park location.

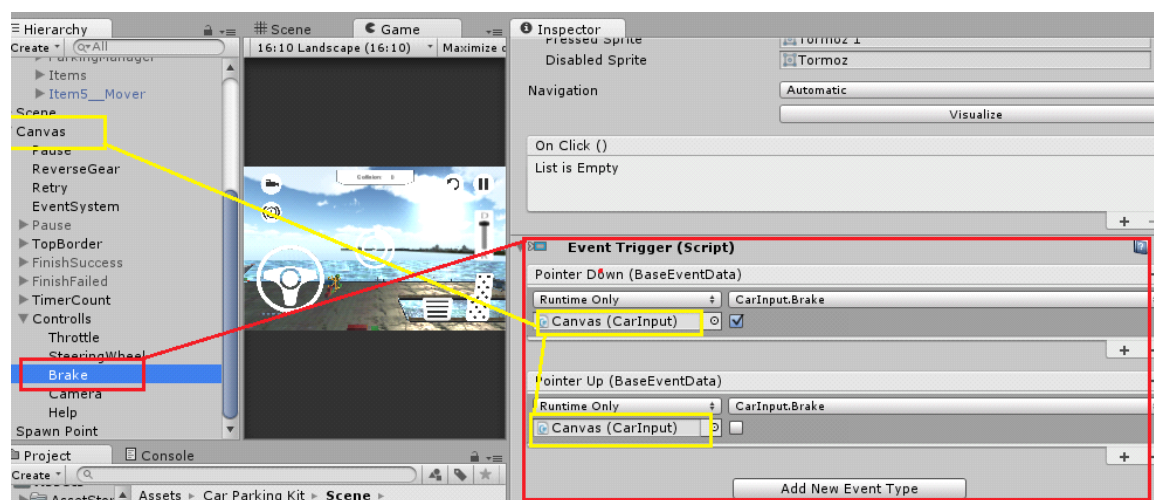

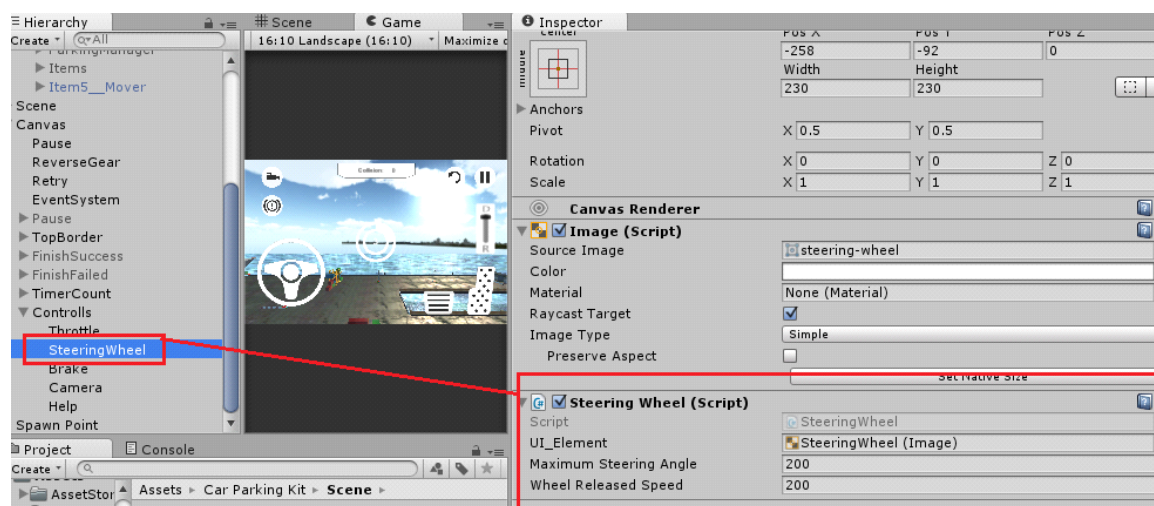

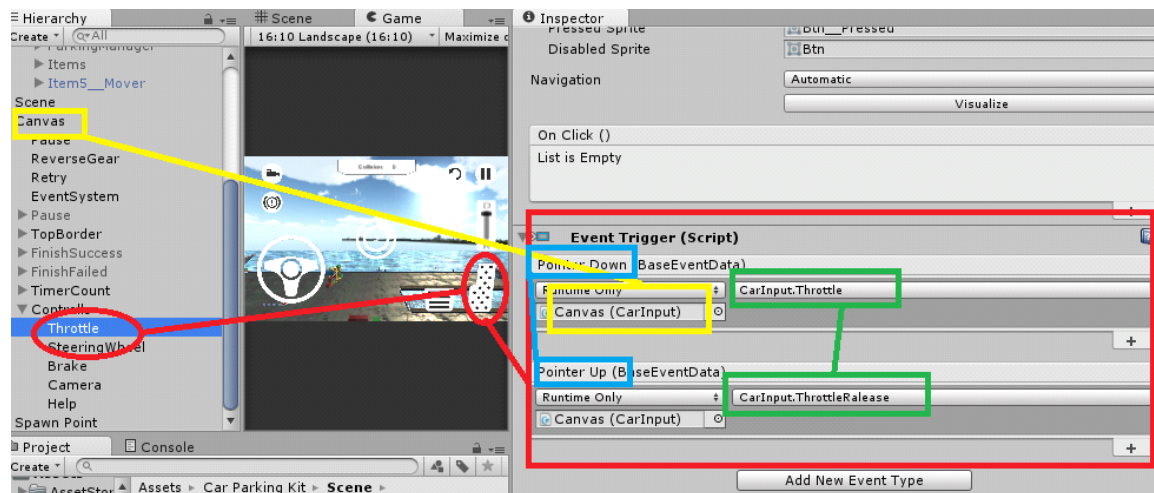

Car Controller: Deactivate mobile control buttons when parking is done.

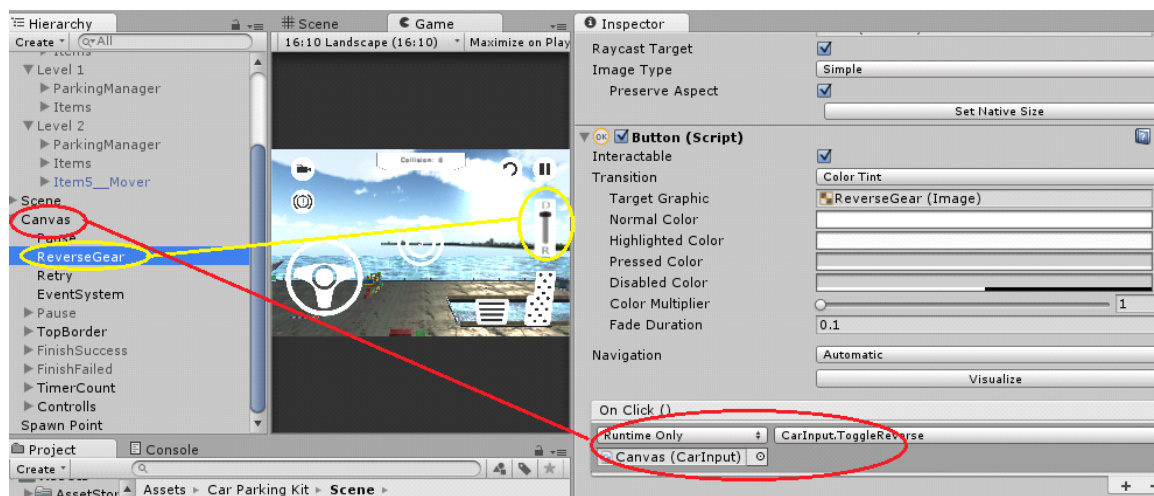

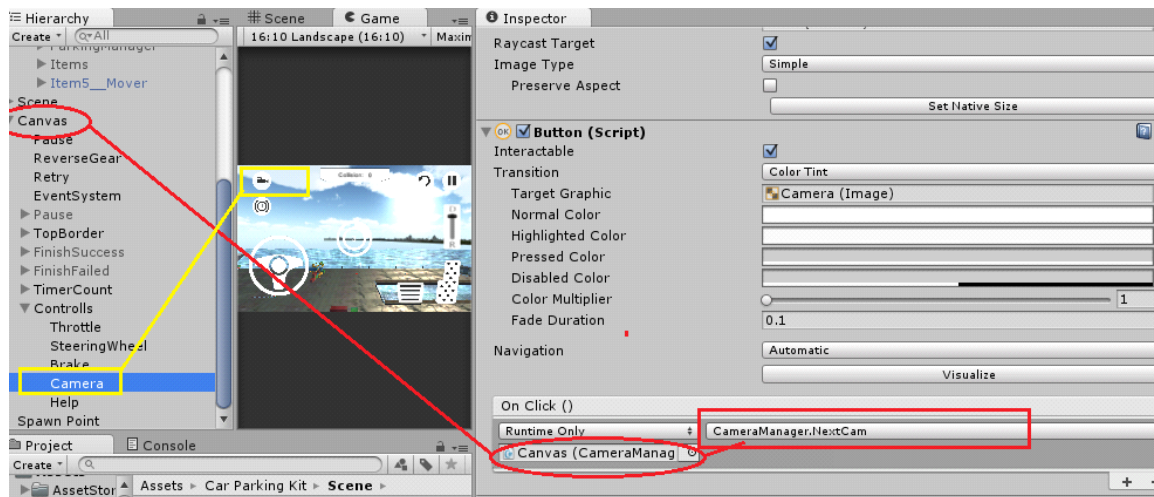

Alarm Sound: Alarm sound when player car touch something!!!

Car Input System:

All car input system is on Canvas and CarInput.cs component. more info on screenshots:

Level System:

You can place ultimate number of the levels prefabs on the scene. See video tutorials for more information

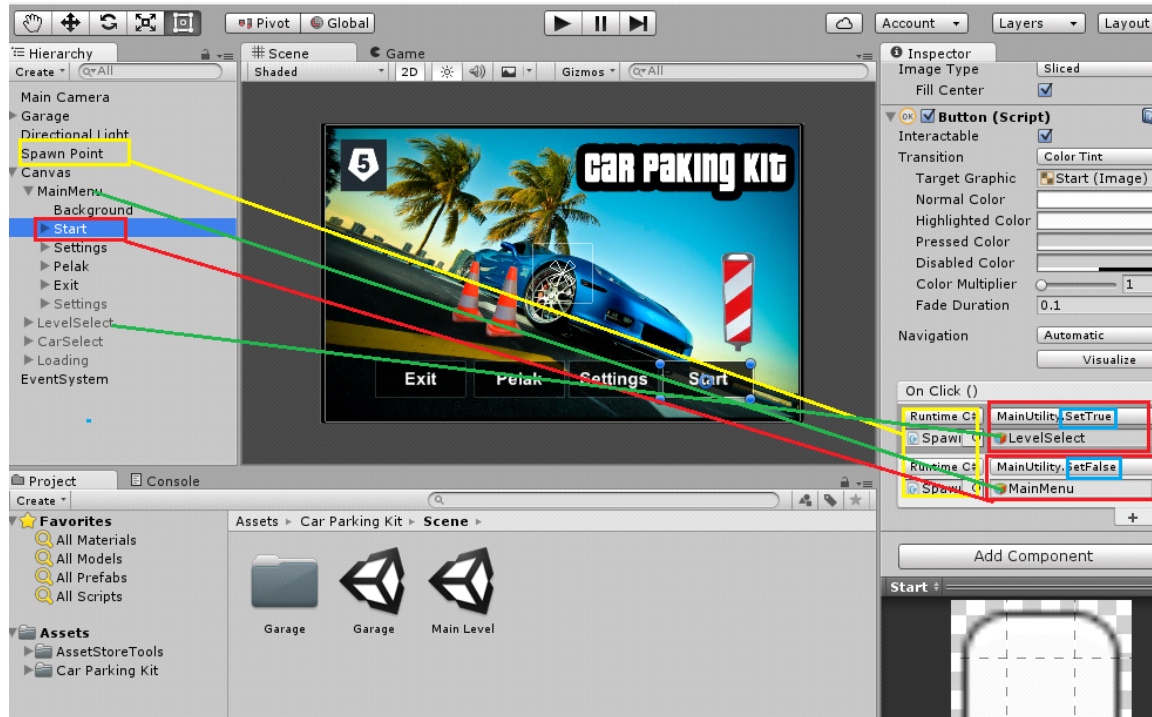

Car Loader:

Drag your car prefabs here:

Main Menu:

Game main menu system is based on activate and deActivate menu elements by selecting them. in this picture when you click on Start button, First we deActivate MainMenu gameObject, then activate LevelSelect gameObject.

CarSelect System:

Cars: List of the all car prefabs from Project View tab.

Spawn Point: where car should spawn there.

Car Price List: List of the each car value(Price)

Lock Icon: Be activated when current selected car is lock

and...
